These numbers represent the value of 1 to 100% of 1,384,602 animals DNA in the database. The closer to 1% is generally perceived as more favorable with the exception of let's say birth weight. If you want bigger calves at birth aim for 50+. 50 is average. Another train of thought is can you have too much marbling (i.e. fat). The decision is still yours. We feel this is a very useful tool in selecting the bull sire that is right for you!
Any questions feel free to reach out.
